you with any feeding issues: 800-986-8800

USE AS DIRECTED BY A DOCTOR  
Directions for Preparation and Use

Your baby's health depends on carefully following these directions. Proper hygiene, handling and storage are important when preparing infant formula. Failure to follow these directions could result in severe harm. Ask your baby's doctor if you need to use cooled, boiled water for mixing and if you need to boil (sterilize) nipple and ring before use.

1 Wash your hands, surfaces and utensils  
Pour desired amount of water into clean bottle (see mixing guide)

2 Add 1 unpacked level scoop (8.7 g) to each 2 fl oz of water  
Return dry scoop to can

3 Cap bottle; shake well; attach nipple  
Once feeding begins, use within 1 hour or discard

Similac Advance EarlyShield® may soften stools to be more like those of the breast-fed infant's.

Mixing Guide

Measure water + Add scoop(s) of unpacked level powder using enclosed scoop = Finished bottle (approx.)

2 fl oz ..... 1 scoop (8.7 g) ..... 2 fl oz

4 fl oz ..... 2 scoops ..... 4 fl oz

8 fl oz ..... 4 scoops ..... 8 fl oz

1 Can = 15 Bottles

When mixed as directed, makes approx. 90 fl oz of formula.

Storage  
Once mixed, store bottles in refrigerator and feed to baby within 24 hours. Close opened can and store in a cool, dry area (not in refrigerator). Use opened can contents within 1 month.

Warning  
Powdered infant formulas are not sterile and should not be fed to premature infants or infants who might have immune problems unless directed and supervised by your baby's doctor. Never use a microwave to warm formula. Serious burns can result.
